(dated 07/02/2011)

7 February 2011 - Italy's Sintofarm s.p.a., a leading company in the animal nutrition and pharmaceuticals industry, has announced that, thanks to the launch of its new Riboflavin (Vitamin B2) 5 sodium phosphate production, it is ready to cater for current global market demand.

The company told Feedinfo News Service today that production of its pharma, feed and food grade Riboflavin 5 sodium phosphate salt is already underway.

"We are ready to launch the product all over the world and we are proud to have contributed to the return of Italy as an active vitamin producing country", states Sintofarm's Managing Director Mr. Mirco Benatti.

"2011 is the year of Sintofarm's Riboflavin 5 sodium phosphate 100% Italian product. We can now promptly deliver the product with its complete documentation. Our product is available in 1, 5 and 20 kg aluminum bags at very competitive prices", argues Mr. Benatti.

Riboflavin 5 sodium phosphate is viewed as essential in animal nutrition as it generates energy, develops nerves, improves blood cells and regulates hormones. It works in tandem with vitamin A to maintain the health of the nervous system, skin, hair, mucous membranes and blood cells. Vitamin B2 deficiency, however, leads to retarded growth, poor feed utilisation and diarrhea in animals.

According to Sintofarm, the launch of the product this year marks the end of 3 years of hard work and numerous scientific research projects. The company views its Riboflavin 5 sodium phosphate as the feed, food and pharmaceutical soluble source of riboflavin. It can be used in water dispersible or liquid preparations.

"The obtained solution is perfectly clear and orange, yellow-coloured as well as suitable liquid feed supplement", says Mr. Benatti.

The product is in conformity with the European, British and US Pharmacopoeias latest edition and with Commission Directive 2008/128. Moreover, it is both Halal and Kosher certified as well as GMO, BSE/TSE, gluten, protein and allergen-free. Sintofarm also obtained FAMI-QS certification for its entire product portfolio in August 2010.

Mr. Benatti comments: "Sintofarm guarantees excellent quality of its Riboflavin 5 sodium phosphate. And, thanks to our good technical, logistic and commercial service, we are going to satisfy the final customer's requirements".

Founded in 1974 and headquartered in Guastalla, Italy, Sintofarm believes it is well-positioned to supply its new riboflavin-5-phosphate sodium all over the world, partly thanks to its expanded and established sales network.
